

Lab program-26:

26. Construct a C program to implement the file management operations.

Code:

```
#include <stdio.h>
#include <stdlib.h>

int main(void) {
    FILE *file = fopen("example.txt", "w");
    if (file == NULL) {
        perror("Error opening the file for writing");
        return 1;
    }

    fprintf(file, "Hello, World!\n");
    fprintf(file, "This is a C file management example.\n");
    fclose(file);
    printf("File created and data written successfully.\n");

    file = fopen("example.txt", "r");
    if (file == NULL) {
        perror("Error opening the file for reading");
        return 1;
    }

    char buffer[100];
    printf("File contents:\n");
    while (fgets(buffer, sizeof(buffer), file) != NULL)
        printf("%s", buffer);
}
```

```
fclose(file);

if (remove("example.txt") != 0) {
    perror("Error deleting the file");
    return 1;
}
printf("File deleted successfully.\n");
return 0;
}
```

OUTPUT:

```
Hello, World!
This is a C file management example.
